TorZo™
sustainable surfaces

ORIENT™

PRODUCT INFORMATION: Orient™ is an elegant line of environmentally friendly sustainable surface materials recently introduced by TorZo.™ Manufactured in the Pacific Northwest, Orient represents the commitment by TorZo to provide the building industry with sustainable surface products that are stylish, durable and – most importantly – environmentally friendly.

SUSTAINABLE: Made from 75-percent FSC composite wood chip material, Orient is an excellent fit for any green building project. When Orient is used in green building projects, it can contribute to the project's LEED certification.

DURABLE: At the heart of the Orient line of surfaces is an acrylic resin. This resin allows Orient to have a hardness coefficient twice that of most hardwoods. Orient's hardness is what makes it ideal for high wear sustainable surface applications.

DISTINCT STYLING: Depending on the environment Orient is used in, it can provide a sleek, modern look or a more rustic, old age look. This styling flexibility is what separates the Orient line of surface materials from its competitors. Orient is available in four standard colors, as well as four custom colors: sage, cobalt, merlot and lavender.

DESIGN FLEXIBILITY: Orient's ability to cater to different styles, ease of fabrication, durability and color options make this sustainable surface material the ideal choice for any project.

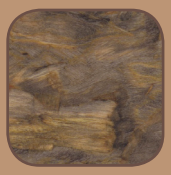
IDEAL FOR:

- Furniture
- Tabletops
- Countertops
- Vanities

KEY FEATURES:

- Twice the hardness coefficient of most hardwoods
- Durable
- Easy to fabricate
- Varying styles

AVAILABLE IN:



Cocoa
