General Information

- Made from rapidly renewable bamboo
- Bamboo is harvested between 5 and 6 years for ideal strength.
- Free from added urea formaldehyde and other harmful VOCs
- Engineered bamboo flooring is 100% bamboo unlike other products that use wood as a substrate.
- Woven bamboo is incredibly hard. It has a Janka rating of 3271, which is 250% harder than red oak.
- Color infused bamboo flooring uses thru-color technology to dye bamboo strands using pure plant based pigments. This increases life of floor as dents and scratches do not require repair as color appears throughout the wear layer.
- Glue, float, or nail to install

- Applications include flooring, walls, and ceilings in both commercial and residential spaces.
- Contributes to LEED MRc6 Rapidly Renewable Materials and IEQc4.4 Low Emitting Materials
- Warranty: lifetime structural, 35 year finish residential, 5 year finish commercial

Construction Methods

- Engineered: 3-Ply, 2 layers of strand bamboo with cross grain bamboo core, tongue and groove fit
- Solid: 1-Ply, tongue and groove fit
