**ARBOR WOOD CO.**

Arbor Wood Co. produces Thermally Modified Wood (TMW) in Duluth, Minnesota for a variety of outdoor and indoor applications including siding, decking, and architectural millwork. The process starts by using domestically sourced and sustainably harvested wood which is then modified using only heat and steam. The result is a high-quality, performance-driven material, which sustains the natural beauty and design element of wood without the use of harsh chemicals. You can let Arbor Wood naturally weather over the years or maintain the rich tones created in the thermal modification process.

**MATERIAL HIGHLIGHTS**

- Increased dimensional stability
- Minimal expansion and contraction
- 30-year warranty
- Able to be glued, painted and finished
- Planks come in profiles for cladding, flooring, and decking as well as dimensional lumber
- Applications: decking, siding, outdoor furniture, trim and millwork, interior flooring, docks, doors and windows, saunas

**SUSTAINABILITY**

- Modification is chemical-free
- Wood is sourced and manufactured in the USA
- FSC certified, USGBC member

### COLOR CHANGE

Thermal modification changes the naturally occurring sugars in the wood resulting in beautiful, rich tones that extend through the full thickness of the material. Since Arbor Wood is still a natural product, the grain and unique characteristics of the wood remain. In an exterior environment, Arbor Wood will move to gray when unfinished and the application of UV inhibitors help slow this process similar to non-modified products.
